SUPPLEMENT TO  
REPORT NO.

25X1X

1. A bridge is located in the Permet area at point M. 597-214. Judging from the building material lying nearby, it was believed to have been recently constructed. The bridge is made of concrete and has four or five piers. It is about 150 meters long and 15 meters high and is wide enough for one-way traffic only.
2. North of this bridge is another one at point M. 592-229. Also of recent construction, it was made of cement and stones into a single arch. It is 30 to 40 meters long and 7 to 8 meters high.
3. Two soldiers were observed on watch in the area between the two bridges.
